

BioHaven™ Floating Islands

for a healthy and beautiful waterway

FII announces the introduction of a natural, living system for waterway stewardship—BioHavens remove pollutants while providing new habitat and creating a beautiful waterscape

Water quality improvement

Floating islands are concentrated wetlands—they provide a huge surface area for microbes which remove harmful pollutants from the water. A 250 sq ft island provides over an acre of wetland surface area.

Microbes help remove nitrates, phosphates, ammonia and heavy metals which get into our waterways through fertilizers and other human activity

Floating islands provide critical wildlife and fish habitat for a wide variety of species

Beautiful living walkways

People always love to walk on water! Whether it be a bridge, a jetty or a pier make it a living system, and add to the beauty of the environment

Habitat restoration

Trumpeter swans, grebe, piping plover ... many sensitive species benefit from predator resistant islands to stage a comeback

Loons have made homes on floating islands to the delight of lake-house owners

Fish find shelter and shade, ducks and geese roost on them, and myriad small life forms burrow in their fibers...and make a wonderful food source for the above

Gardens and Parks

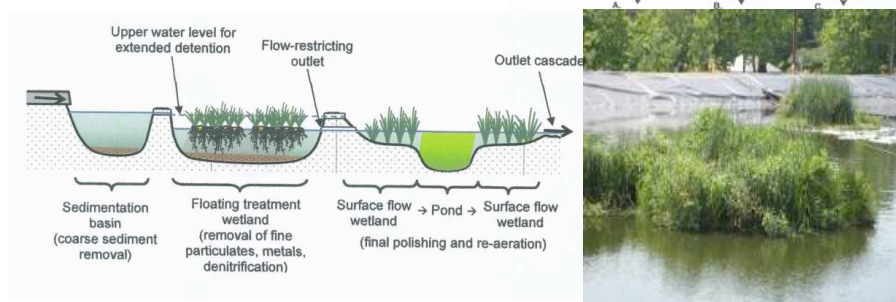

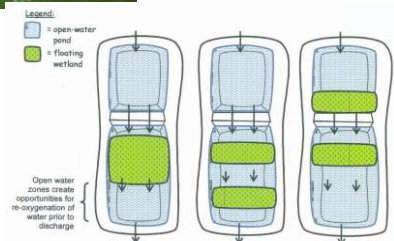

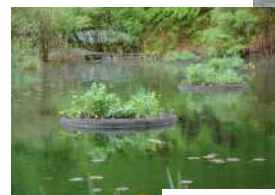

Floating islands make an innovative and dramatic display in parks and gardens while benefiting the water. Golf course ponds are full of nutrients which a floating island can remove naturally. Zoos too.....

Floating islands are suitable for reservoirs, lakes, rivers...in fact, any waterway

Water treatment

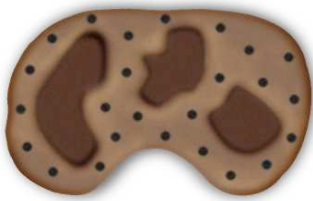

Effluent ponds, stormwater ponds, farm ponds.... water in these is typically nutrient-rich, and often out of compliance with regulations. Engineered solutions are typically beyond the reach of many small communities or landowners.

With a floating island you can afford to treat your water. With wind and solar power assisting the natural process, water can be improved holistically and naturally. You are invited to contact FII's in-house scientist to obtain the latest efficacy data.

WE HAVE THE RIGHT SIZE ISLAND FOR YOU....CHOOSE FROM OUR READY-BUILT MODELS BELOW OR SPECIFY A CUSTOM ISLAND OF YOUR CHOICE

BioHavens are a truly affordable solution

25 ft²
(7.0 ft x 4.5 ft)

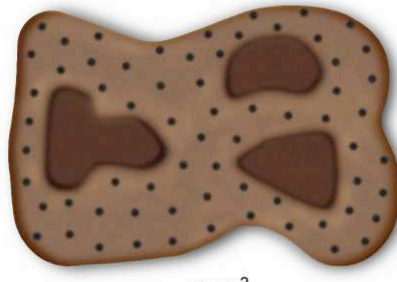

36 ft²
(6.5 ft x 6.5 ft)

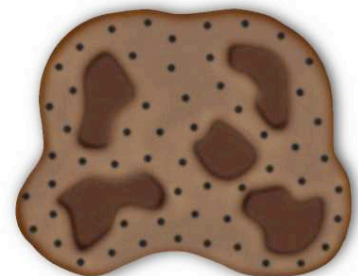

45 ft²
(7.0 ft x 7.0 ft)

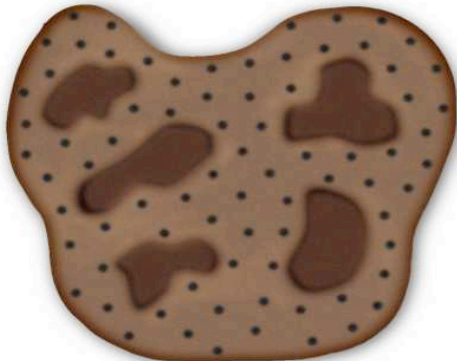

64 ft²
(8.0 ft x 9.0 ft)

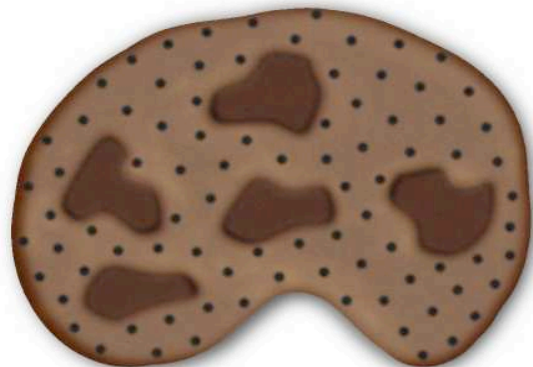

90 ft²
(8.0 ft x 12.0 ft)

130 ft²
(14.0 ft x 10.0 ft)

150 ft²
(15.0 ft x 13.5 ft)

250 ft²
(20.0 ft x 15.0 ft)

Islands can be custom-built to any size, any shape

Buoyancy can be adjusted to support heavy weights, such as walkways, docks, gazebos (pricing adjusted accordingly)

Experienced island dealers available to install your project

We will work with you to ensure your project achieves desired results, holistically and naturally

Islands backed up by 7-year warranty

Standard thickness 8"

Large island projects can be constructed using modules, 5' x 8' x 10", linked together and supported by a framing system where weight-bearing is a requirement.

Islands can be joined together in countless combinations.
